

In-Car Air-Quality-Control (IC-AQC) Driver Behavior Analysis

Intern: Feng HU (The Graduate Center, CUNY)

Mentor: Ning (Danny) DUAN (IBM)

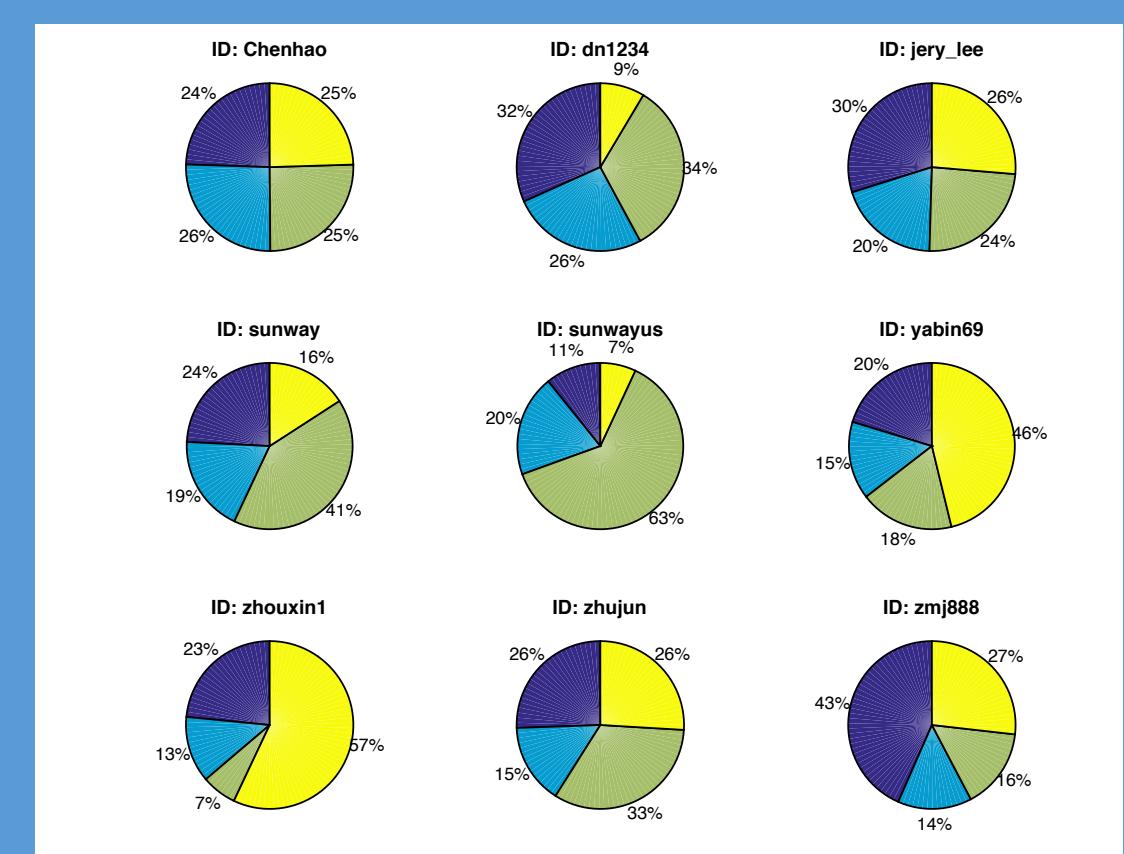

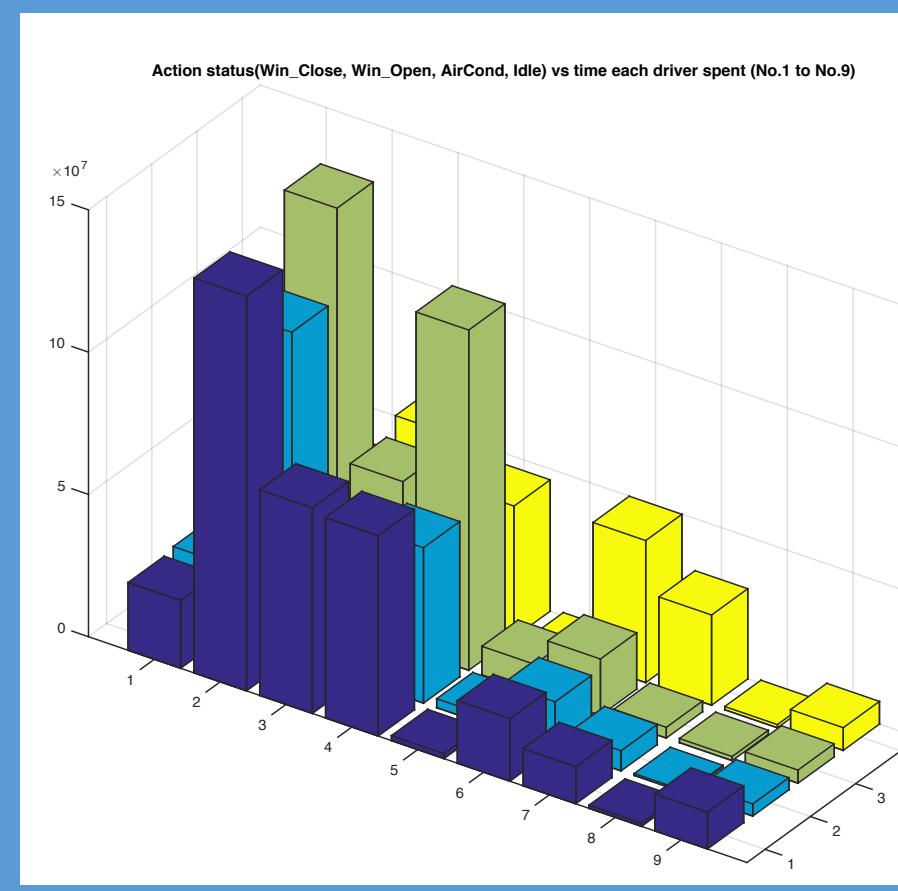

Manager: Jun ZHU & Wei SUN (IBM)

Background

- More and more people use vehicles in their daily life. In Beijing City only, there are 5.62 million vehicles as of 2015.^[1]
- Air pollution in many cities is a serious problem, e.g. in Beijing, there are 119hs per week people living in unhealthy air quality, 85% of which are under serious pollution.^[2]
- Drivers usually lack visibility of air pollution in the traffic and effective means to reduce exposure while driving.
- A novel intelligent in-vehicle air quality management solution is proposed by utilizing Internet of Things (IoT) technology for minimizing the travelers' pollution exposure.
- Driver behavior analysis: (1) Patterns between environment features and a driver's In-Car Air-Quality Control(IC-AQC) behavior; (2) Driver preference identification and profile generation.

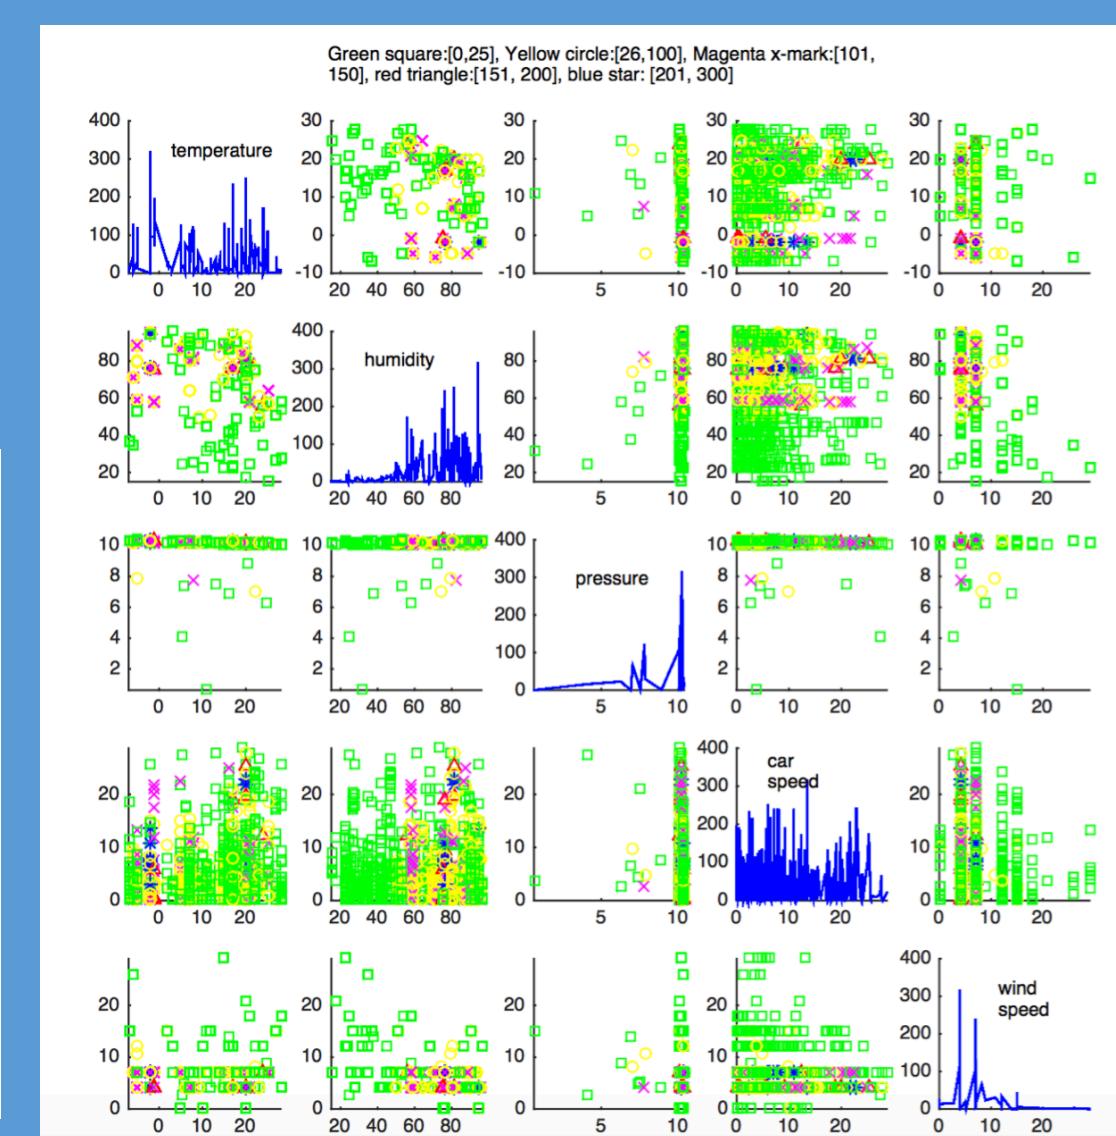

Results

Driver Data Analysis

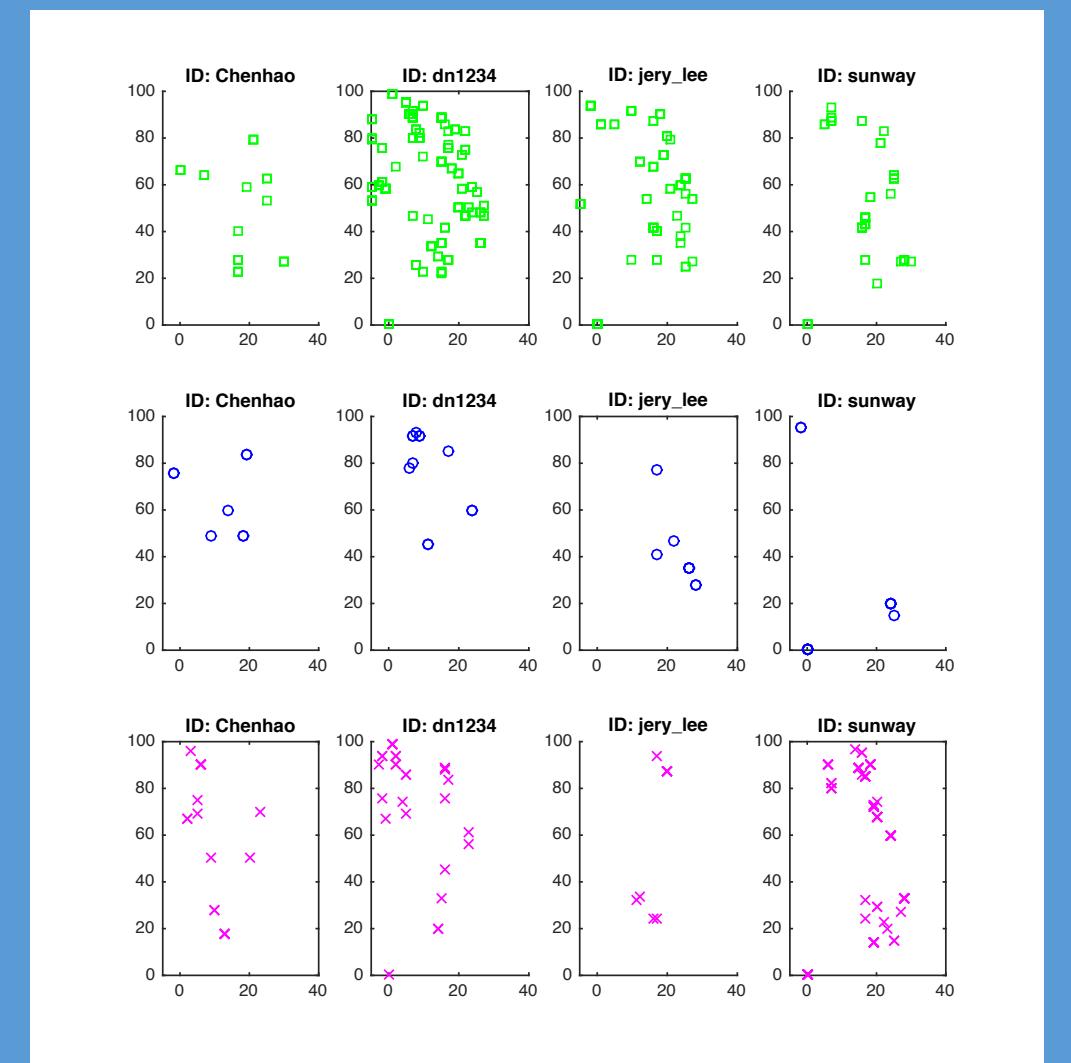

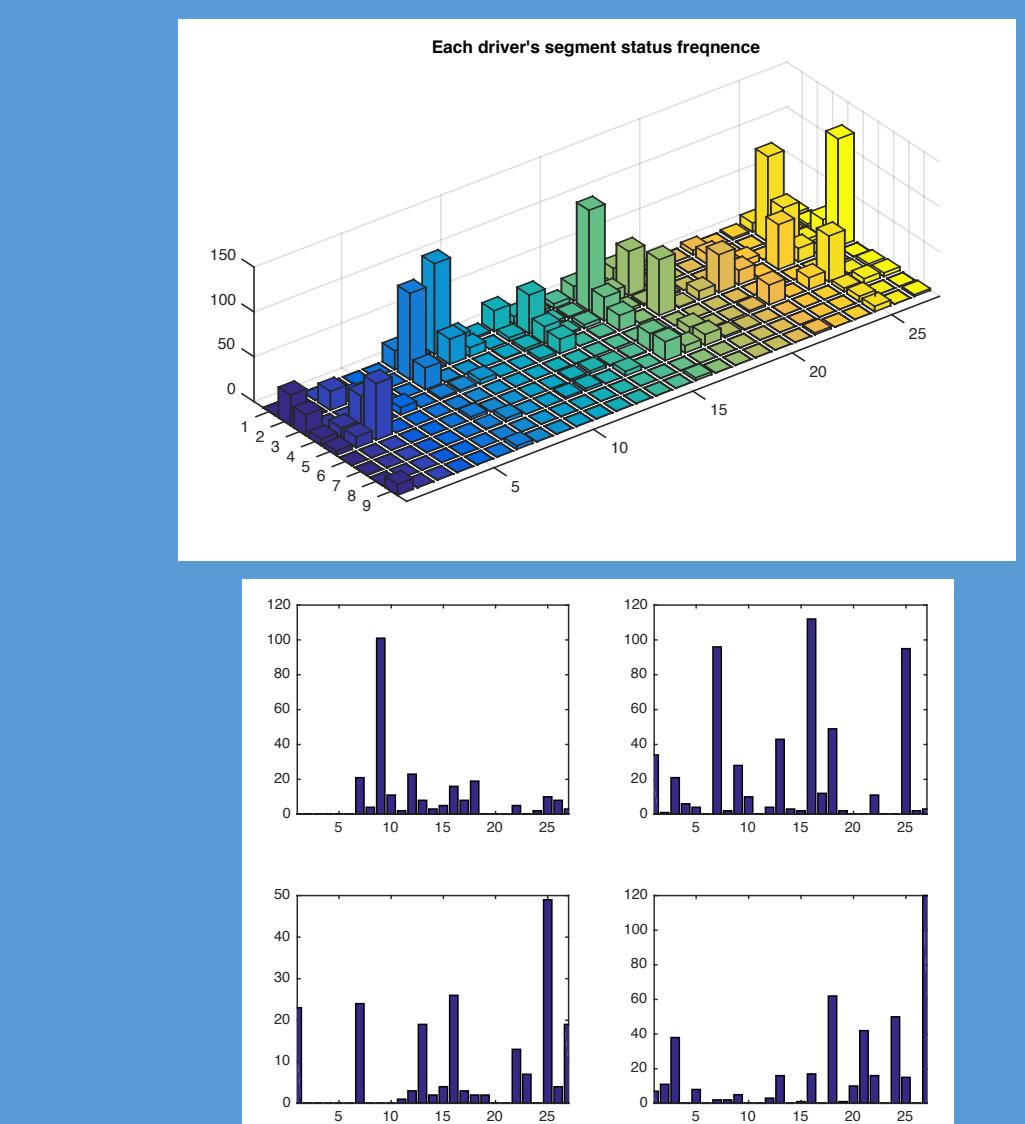

Driver Action Prediction and Correlation Matrix between Surroundings and In-vehicle Air Quality

Algorithm/ID	dn1234	jery_lee	sunway	chenhao
Linear SVM	84.7%	82.7%	70.2%	67.3%
Decision Tree	86.1%	84.5%	79.5%	67.3%
Knn	85.4%	82.7%	68.9%	59.6%
Ensemble Boosted Trees	85.0%	83.6%	62.3%	67.3%
GBDT	98.95%	86.49%	84.0%	72.22%

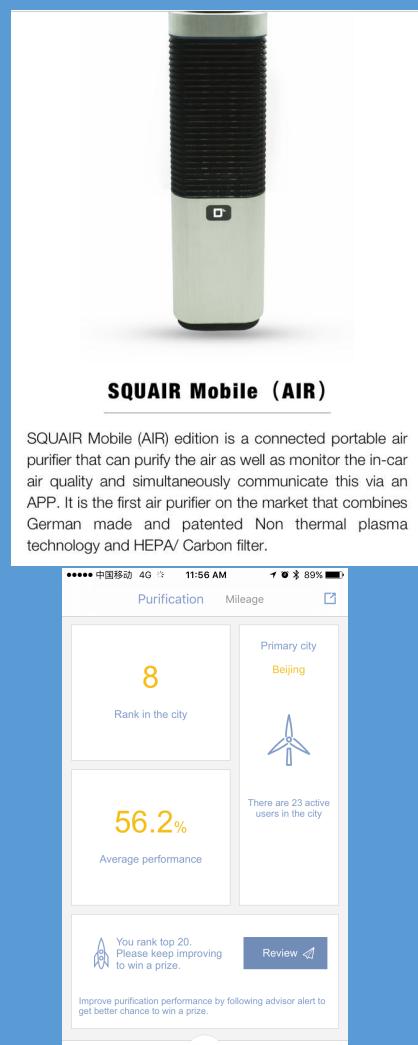

Driver Profile Generation

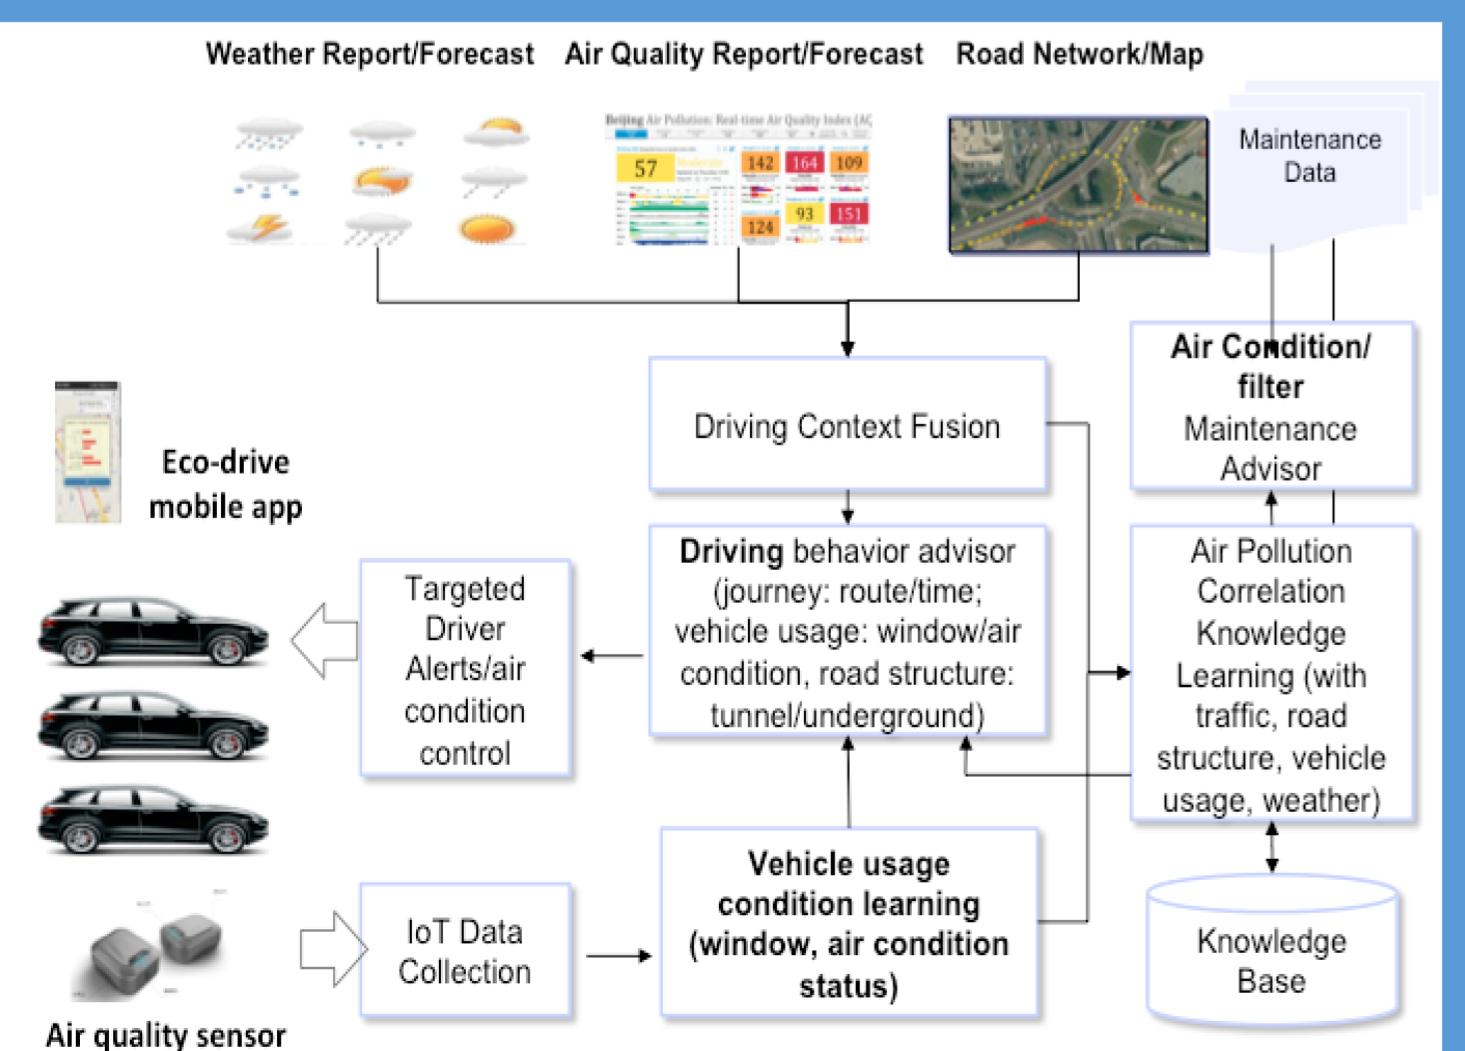

Procedures

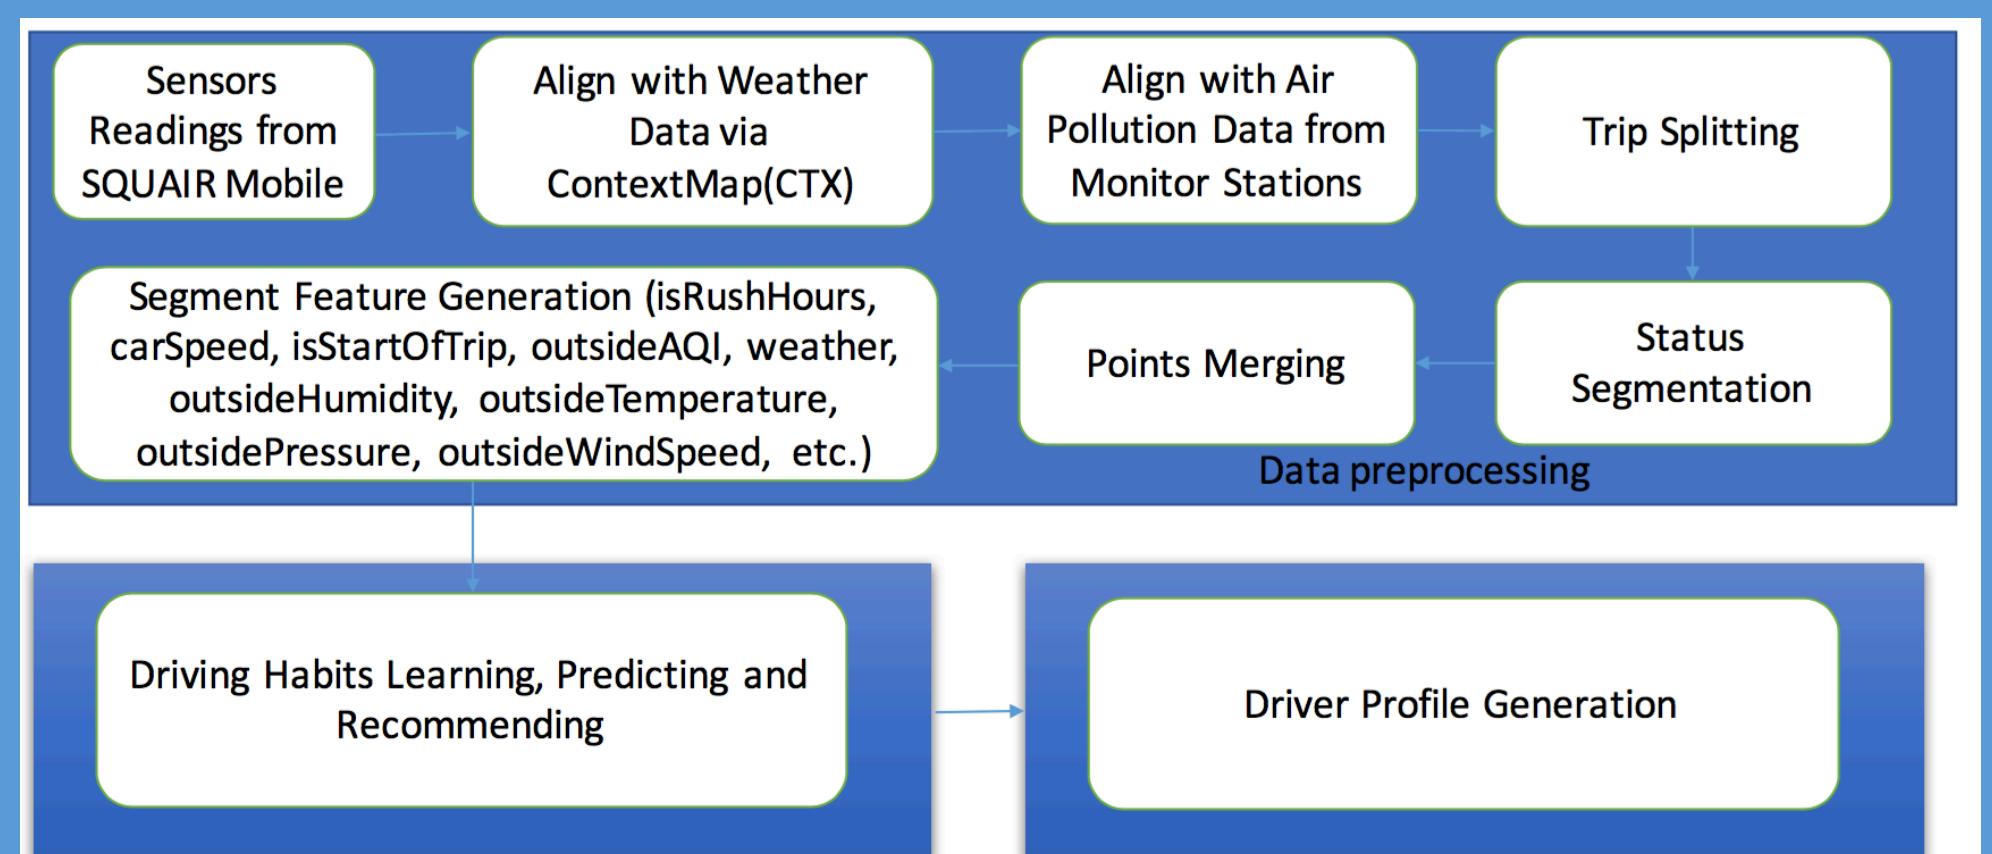

Device and App

System Diagram

Data Preprocessing and Analysis Workflow

Summary

- Multimodal sensor data fusion and features extraction/generation for driver behavior prediction
- Develop tools for data visualization and correlation analysis
- Driver behavior pattern recognition and profile generation
- In-vehicle air quality correlation analysis and driver action prediction
- Coauthor and submit a paper.“Intelligent in-vehicle air quality management: a smart mobility application dealing with air pollution in the traffic”
- Team seminar presentation about my Phd research work
